

INDUSTRIAL PC SOLUTIONS FOR MACHINE VISION

In modern manufacturing, machine vision is essential to ensure quality and repeatability. Reventur offers a complete range of industrial PC solutions tailored for every level of vision application: from basic inspection to advanced AI-powered systems.

Compact but Powerful

Fanless systems designed for inspection and quality control. These compact units deliver high performance in a small footprint, ideal for space-constrained environments.

Integrated GPU

Industrial PCs with built-in GPU capabilities, perfect for deep learning and multi-camera applications. These systems combine robustness with the power needed for real-time AI processing.

Expandable GPU

High-performance platforms with support for dedicated GPUs, enabling scalable AI workloads and complex vision tasks. Ideal for demanding industrial environments.

All hardware has been tested and validated for compatibility with major vision software platforms, and certified for industrial environments to ensure reliability and long-term operation.

Whether you're building a simple inspection station or deploying advanced AI vision systems, Reventur provides the right industrial PC solution to meet your needs. Our mission is to simplify your experience while delivering robust, high-performance technology.
