## Technical catalogue: Duct systems

Spring program comprises the galvanized duct system, the welded duct system in 2 and 3 mm plate and the JK-6" duct system that is specially designed for material transport.

The systems are made up of a wide program of ducts, bends, valves, diverters, transition pieces, jet and rain caps etc.

Spring duct systems are used within all extraction solutions for transporting particles and air.

This catalogue comprises all Spring standard components.

Special components are made to order.

### Galvanized duct system

The galvanized duct system comprises all the components required for a complete extraction solution.

- laser welded ducts
- longitudinally lock formed ducts
- pressed bends
- tight sliding dampers
- tapers and transition pieces

The ducts are made from B500 quality sheet in sheet thickness 0,75 – 1,00 mm. The sheet is hot-galvanized with a zinc coating of minimum 275 g/m<sup>2</sup>.

The measurements given of the galvanized duct system are internal measurements.

Galvanized components in special dimensions can be made to order

### 2 and 3 mm duct system

The 2 and 3 mm duct system comprises all the components required for a complete extraction solution.

- seam welded ducts
- pressed bends
- sliding dampers
- diverters – both pressed and welded
- tapers and transition pieces

The heavy plate thickness makes this duct system suitable for plants which, due to the type of particles they transport, are subjected to heavy wear.

The 2 and 3 mm duct system is made from the quality steel plate – Domex 240 – in plate thickness 2 and 3 mm.

The components are externally sandblasted in accordance with SA 2,5 and then primed with epoxy powder primer. The thickness of the coating is 50 – 60 my, and the primer consists of 70% zinc. The standard color is RAL 7032.

*Laser welded and longitudinally lock formed duct system, galvanized*

*2 and 3 mm duct system*

Section: 00  
Revised: 01.01.2016

## Technical catalogue: Duct System

Alternatively the components can be supplied painted with polyester powder with a 60 – 80 my thick coating. The standard color of the polyester primer is RAL 5010.

The components can be made to order with a surface treatment, corrosion class 4, in accordance with DS 412. The measurements given for 2 and 3 mm are nominal measurements, that is to say that with regard to 2 mm the internal measurements are equal to the nominal measurements minus 1 mm, and with regard to 3 mm the internal measurements are equal to the nominal measurements minus 2 mm.

### Operating temperature

Both standard duct systems can be used at temperatures of up to 80°C. Components with gaskets to withstand higher temperatures are made to order.

### Density

Leaks in a duct system will result in loss of capacity and undesirable noise. Spring duct systems are made with small tolerances to ensure tight connections. The mounting of pull rings or rapid lock pull rings ensures that the duct line fulfils the requirements of density class C, which is the highest density class within industrial extraction.

With regard to the mounting of flanges, it is recommended to apply joint filler or rubber flanges (EPDM) to ensure tight connections. Correctly assembled, with joint filler or rubber flanges, the connections will fulfill the requirements of density class C.

## Technical catalogue: Duct System

### **Laser welded and longitudinally lockformed ducts, galvanized**

Diameter:  $\varnothing 80 - \varnothing 1000$  mm.

Spring's laser welded and longitudinally lock formed

ducts are galvanized and made from 0,75 mm, 0,90 mm or 1,00 mm galvanized sheet (s).

The ducts are made to order in other qualities and dimensions.

Ducts with a diameter of up to  $\varnothing 400$  mm are, as standard, supplied as laser welded ducts in

lengths of 0,5 m, 1,0 m and 2,0 m. Ducts with a

diameter of  $\varnothing 450$  mm are supplied lock formed

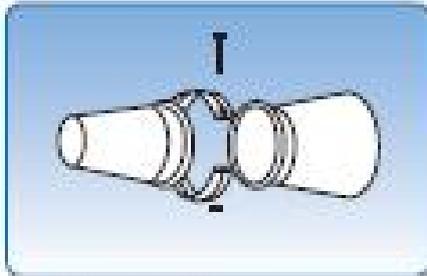

in standard lengths of 0,5 m, 1,0 m and 2,0 m.

Ducts with dimensions other than those specified

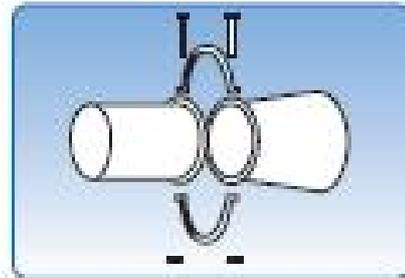

in the table are always supplied lock formed.

Laser welded

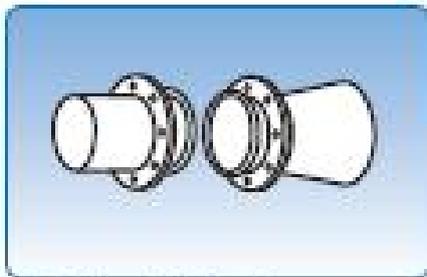

## Assembly method available

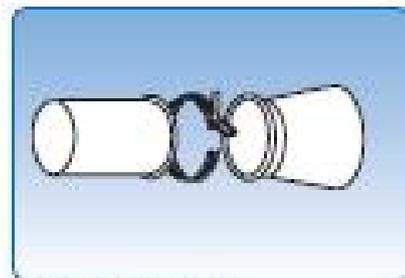

For wide pull rings (f bb)

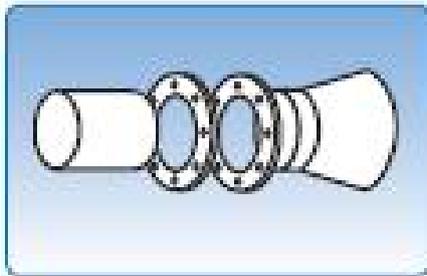

For pull rings (f b)

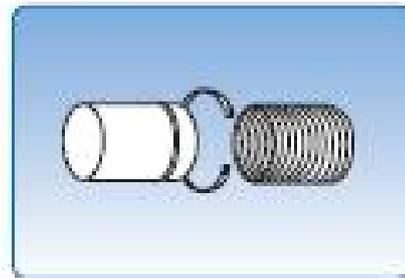

With base flange fitted (f b.m.f)

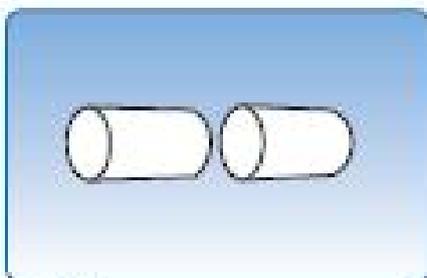

For rapid lock pull rings (f.j.m)

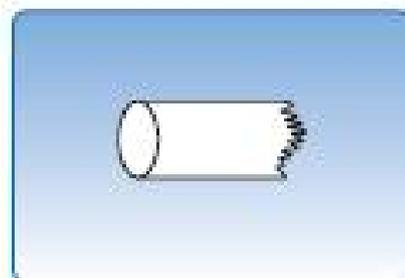

For flanges (f.f)

For hoses (f.d)

Conical (f.c)

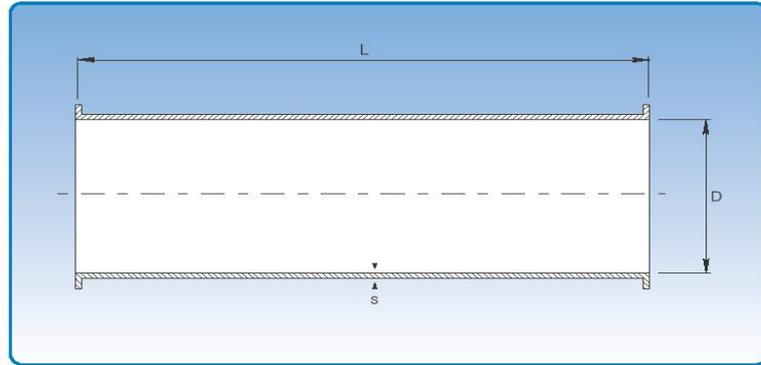

Smooth (f.g)

## Laser welded and longitudinally lock formed ducts, galvanized (Diameter: $\varnothing 80 - \varnothing 1000$ mm.)

Laser welded and longitudinally lock formed ducts are galvanized and made from 0,75 mm, 0,90 mm or 1,00 mm galvanized sheet (s). The ducts are made to order in other qualities and dimensions.

Ducts with a diameter of up to  $\varnothing 400$  mm are, as standard, supplied as laser welded ducts in lengths of 0,5 m, 1,0 m and 2,0 m. Ducts with a diameter of  $\varnothing 450$  mm are supplied lock formed in standard lengths of 0,5 m, 1,0 m and 2,0 m.

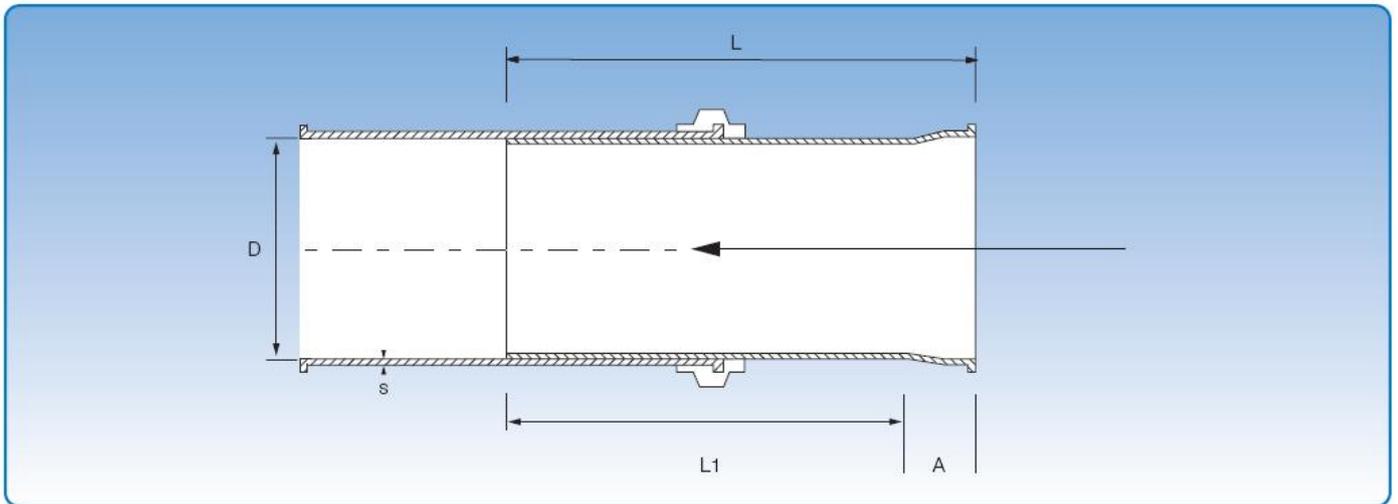

Ducts with dimensions other than those specified in the table are always supplied lock formed.

# 30° straight branch pieces, galvanised

Calculation:  
 L1 = See table  
 $L2 = \frac{1}{2} \cdot \left( L1 - \frac{A}{\tan \alpha} \right)$   
 $L3 = \frac{L1 - L2}{\cos \alpha} - \left( \frac{B}{2} \times \tan \alpha \right)$

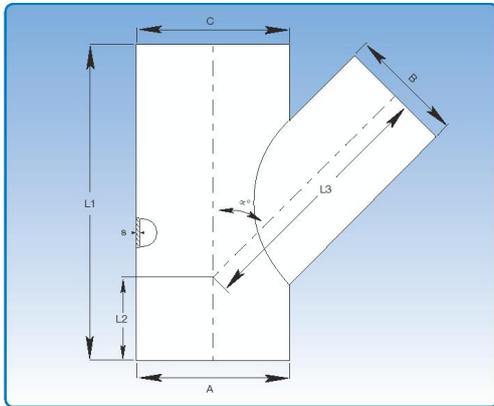

Example:  
 A = 650, B = 650, C = 400  
 L1 = 1050 mm  
 $L2 = 0,5 \cdot \left( 1050 - \frac{650}{\tan 29,7} \right) = 0,5 \cdot (1050 - 1139,57)$   
 L2 = 90,07 ~ 90 mm  
 $L3 = \frac{1050 - 90}{\cos 29,7} - \left( \frac{650}{2} \times \tan 29,7 \right) = 1105,19 - 185,38$   
 L3 = 919,81 ~ 920 mm

# 45° straight branch pieces, galvanised

**Calculation:**

L1 = See table

$$L2 = \frac{1}{2} \cdot \left( L1 - \frac{A}{\text{tg} \alpha} \right)$$

$$L3 = \frac{L1 - L2}{\cos \alpha} - \left( \frac{B}{2} \times \text{tg} \alpha \right)$$

**Example:**

A = 500, B = 500, C = 450

L1 = 950 mm

$$L2 = 0,5 \cdot \left( 950 - \frac{500}{\text{tg} 44,7} \right) = 0,5 \cdot (950 - 505,26)$$

$$L2 = - 444,24 \rightarrow - 444 \text{ mm}$$

$$L3 = \frac{950 + 444}{\cos 44,7} - \left( \frac{500}{2} \times \text{tg} 44,7 \right) = 1961,17 - 247,40$$

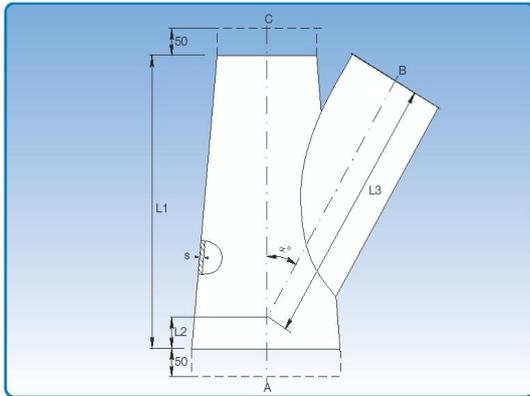

$$L3 = 1713,77 \rightarrow 1714 \text{ mm}$$

# 30° conical branch pieces, galvanised

Calculation of L1, L2 and L3:  
 L1 = See table  

$$L2 = \left(\frac{L1}{2}\right) - \left(\frac{A+C}{4 \times \text{tg } \alpha^\circ}\right)$$

$$L3 = \left(\frac{L1-L2}{\cos \alpha^\circ}\right) - \left(\frac{B}{2} \times \text{tg } \alpha^\circ\right)$$

Example:  
 A = 500, B = 300, C = 350  
 L1 = 600 mm  

$$L2 = \frac{600}{2} - \left(\frac{500+350}{4 \times \text{tg } 44,6}\right) = 300 - 215,49$$

$$L2 = 84,51 \text{ -- } 85 \text{ mm}$$

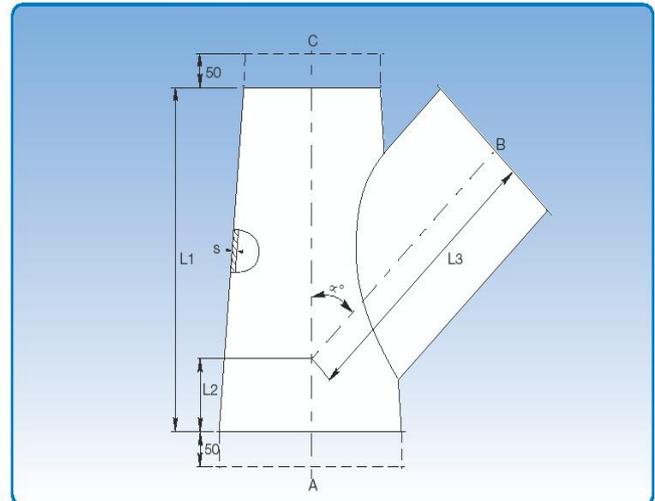

$$L3 = \frac{600 - 85}{\cos 44,6} - \left(\frac{300}{2} \times \text{tg } 44,6\right) = 723,29 - 147,92$$

$$L3 = 575,37 \text{ -- } 575 \text{ mm}$$

**Calculation of L1, L2 and L3:**

L1 = See table

$$L2 = \left( \frac{L1}{2} \right) - \left( \frac{A+C}{4 \times \text{tg } \alpha^\circ} \right)$$

$$L3 = \left( \frac{L1-L2}{\cos \alpha^\circ} \right) - \left( \frac{B}{2} \times \text{tg } \alpha^\circ \right)$$

**Example:**

A = 500, B = 300, C = 350

L1 = 600 mm

$$L2 = \frac{600}{2} - \left( \frac{500 + 350}{4 \times \text{tg } 44,6} \right) = 300 - 215,49$$

L2 = 84,51 ~ 85 mm

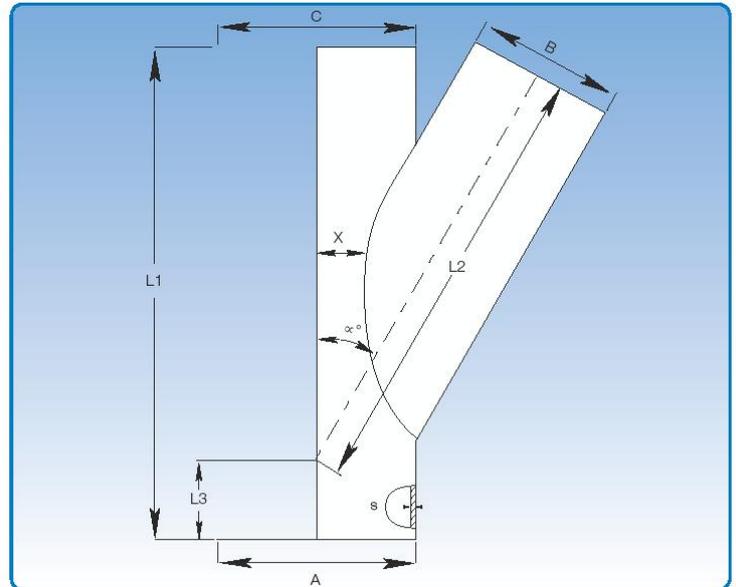

$$L3 = \frac{600 - 85}{\cos 44,6} - \left( \frac{300}{2} \times \text{tg } 44,6 \right) = 723,29 - 147,92$$

L3 = 575,37 ~ 575 mm

850	1450	44.9	0.9				
900	1650	44.9	0.9				

**Calculation:**

L1 = See table

$$L2 = \frac{1}{2} \cdot \left( L1 - \frac{A}{\tan \alpha} \right)$$

$$L3 = \frac{L1 - L2}{\cos \alpha} - \left( \frac{B}{2} \times \tan \alpha \right)$$

**Example:**

A = 700, B = 350, C = 700

L1 = 950 mm

$$L2 = 0,5 \cdot \left( 950 - \frac{700}{\tan 29,6} \right) = 0,5 \cdot (950 - 1332,22)$$

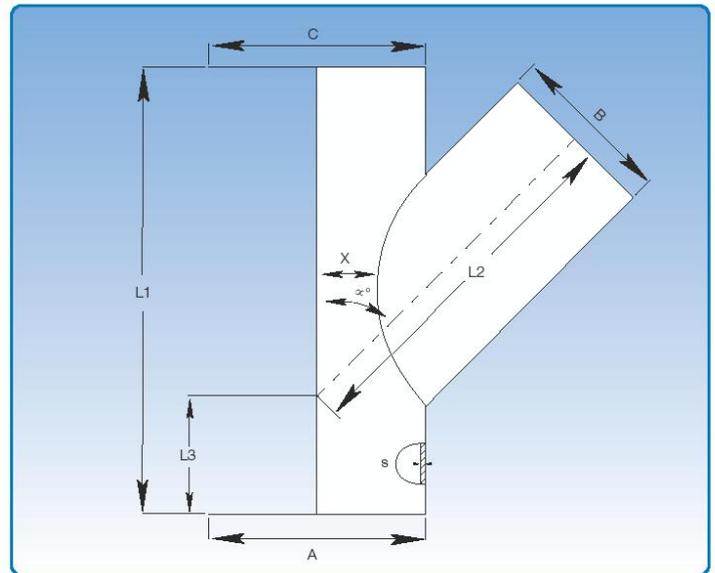

L2 = 382,72 ~ 383 mm

$$L3 = \frac{950 - 383}{\cos 29,6} - \left( \frac{350}{2} \times \tan 29,6 \right) = 652,10 - 99,41$$

L3 = 552,69 ~ 553 mm

800	1450	44.8	0.9				
850	1450	44.9	0.9				
900	1650	44.9	0.9				

**Calculation:**

L1 = See table

$$L2 = \frac{1}{2} - \left( L1 - \frac{A}{\text{tg} \alpha} \right)$$

$$L3 = \frac{L1 - L2}{\cos \alpha} - \left( \frac{B}{2} \times \text{tg} \alpha \right)$$

**Example:**

A = 550, B = 500, C = 550

L1 = 1050 mm

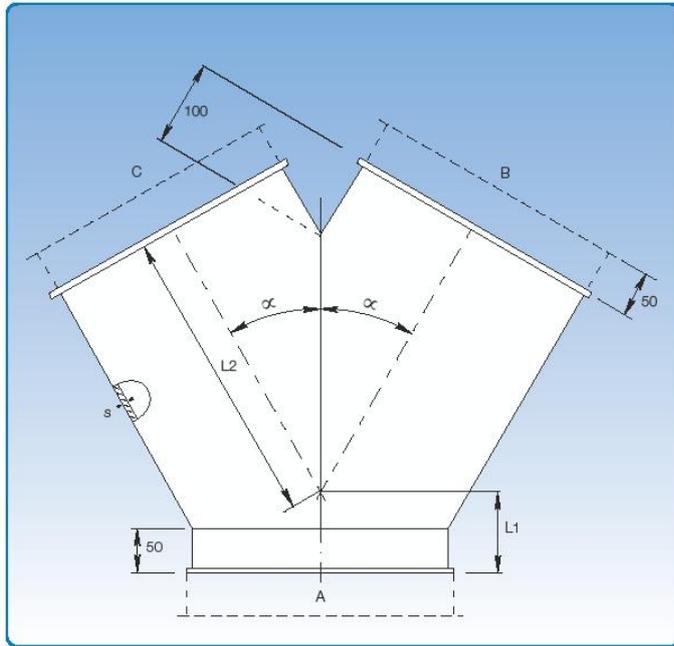

$$L2 = 0,5 - \left( 1050 - \frac{550}{\text{tg} 44,8} \right) = 0,5 - (1050 - 553,85)$$

L2 = - 495,65 ~ - 496 mm

$$L3 = \frac{1050 - 496}{\cos 44,8} - \left( \frac{500}{2} \times \text{tg} 44,8 \right) = 2178,78 - 248,26$$

L3 = 1930,78 ~ 1931 mm

## 30° and 45° trouser pieces, galvanized

$\alpha = 30^\circ \text{ or } 45^\circ$

Calculation of L1 and L2 for  $2 \times 30^\circ$ :

$$L1 = (A \times 0,134) + 50$$

$$L2 = (B \times 0,866) + 100$$

Example:

$$A = B = C = 200$$

$$L1 = (200 \times 0,134) + 50 = 76,8$$

$$L2 = (200 \times 0,866) + 100 = 273,2$$

Calculation of L1 and L2 for  $2 \times 45^\circ$ :

$$L1 = (A \times 0,207) + 50$$

$$L2 = (B \times 0,5) + 100$$

Example:

$$A = B = C = 200$$

$$L1 = (200 \times 0,207) + 50 = 91,4$$

$$L2 = (200 \times 0,5) + 100 = 200$$

With conical trouser pieces where  $A > B$ ,  $A < C$  and  $B = C$ , L1 and L2 must be stated.

**Diameter:  $\varnothing 80 - \varnothing 1000$  mm.**

**Galvanized trouser pieces are made from 0,90 mm galvanized sheet (s).**

**When placing an order, the measurements for A, B and C must be stated.**

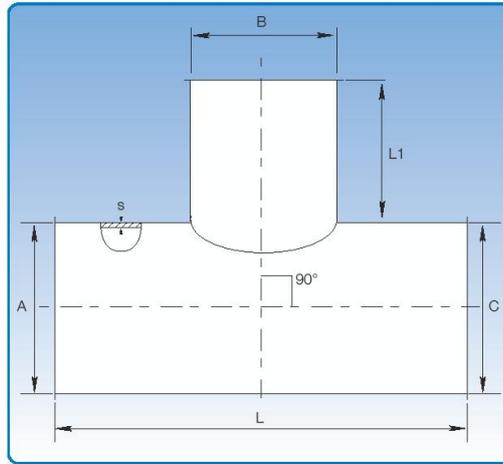

**The legs of the trouser piece (B and C) are increased by 50 mm when assembling with wide pull rings [f.bb], rapid lock pull rings [f.lyn] and flanges [m.fl].**

**The trouser pieces are made to order in other degrees and qualities.**

**The following apply to galvanized trouser pieces:**

**$A > B$  and  $A < C$ . When  $C \neq B$  it is the largest value of B and C that must be applied in the calculation.**

# 90° T-pieces, galvanised

Dimensional specifications are given in the table below.

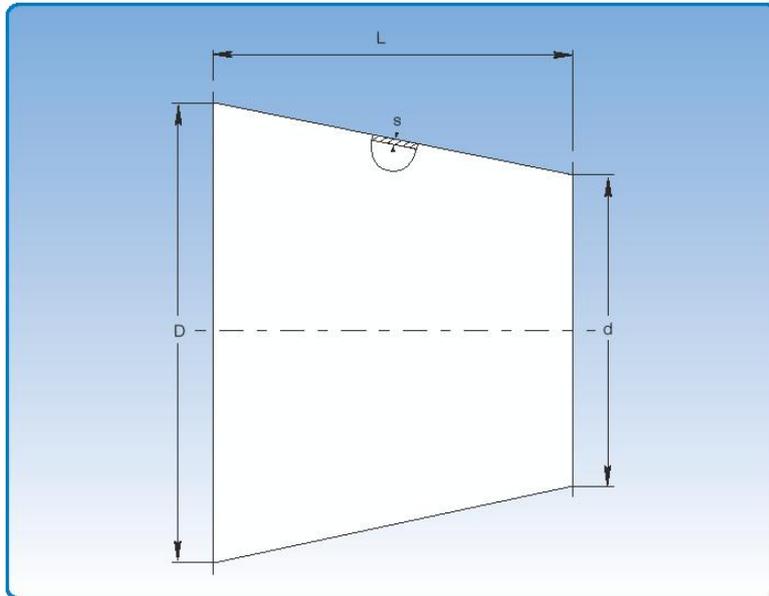

Dimensional specifications

1000	1.00	1400	200.00

## Tapers, galvanized

Diameter:  $\varnothing 80 - \varnothing 1000$  mm.

Tapers are spot welded and made as standard from 0,90 mm Galvanized sheet (s).

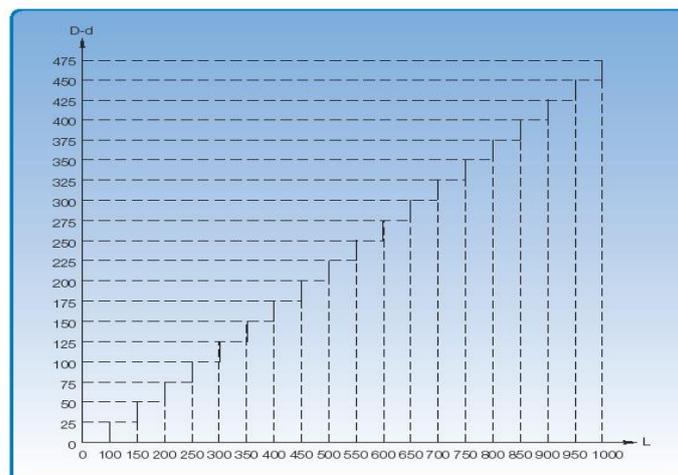

When mounting with wide pull rings [f.bb], rapid lock pull rings [f.lyn] and flanges [m.fl], the length L is increased by  $2 \times 50$  mm.

Calculation of the length L of the taper:

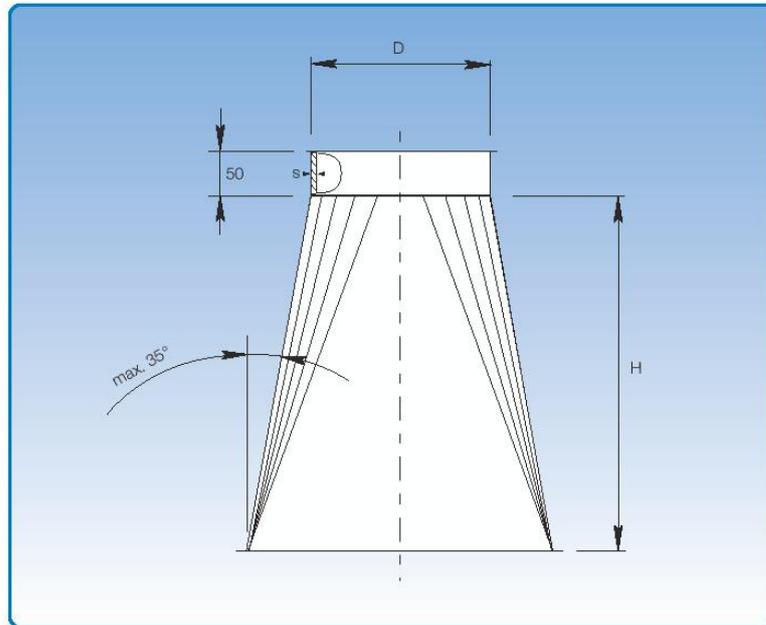

The difference between the large and the small diameter ( $D - d$ ) of the taper is plotted on the vertical axis (y) in the system of co-ordinates.

By following the line from this point to the intersection, the length L is read in the corresponding point on the horizontal axis (x) in the system of co-ordinates

## Transition pieces, Galvanized

Diameter:  $\varnothing 80 - \varnothing 1000$  mm

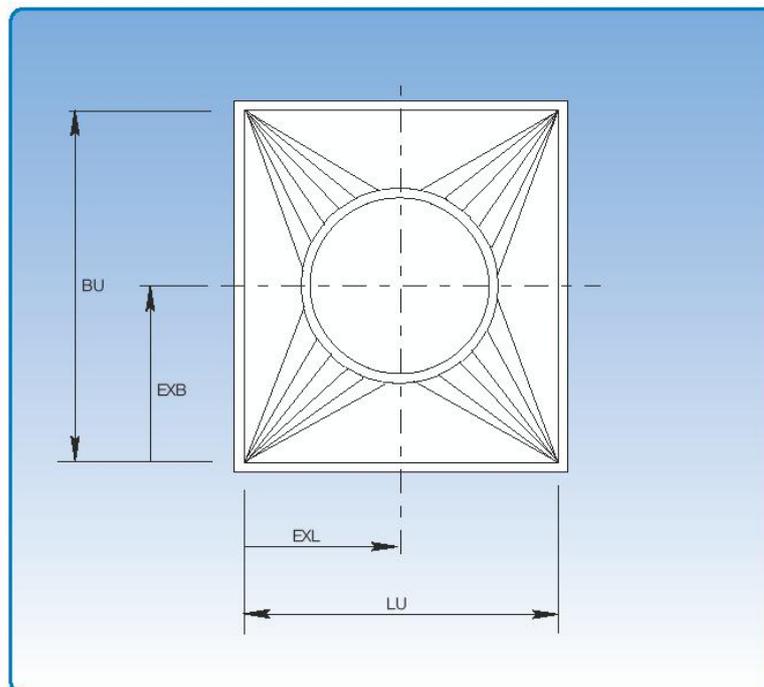

Transition pieces are spot welded and made from 0,90 mm galvanized sheet (s).  
The following formula applies to all transition pieces.

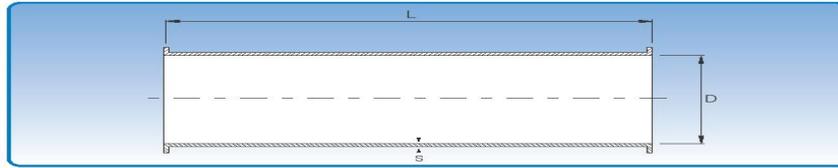

Calculation of the length H:

$$H = 250 + 0,5 \times (\text{maximum value of } LU - D) \text{ or } (BU - D).$$

The transition pieces are made to order in other dimensions. The transition pieces can also be made asymmetrical.

## Ducts with direct flange, 2 and 3 mm

Diameter:  $\varnothing 300 - \varnothing 1000$  mm.

Ducts with direct flange are welded and made from 2,00 and 3,00 mm steel plate (s).

These ducts are supplied with rolled flanges [d.fl] in the same material as the ducts.

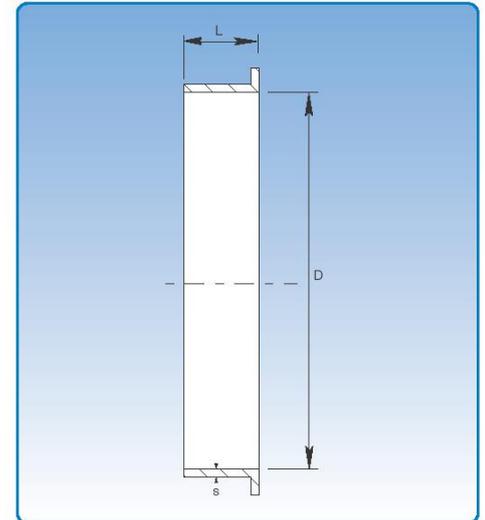

The rolled flanges can be used together with standard program of loose and welded flanges.

## 30° trouser pieces, 2 and 3 mm

Diameter A for 2 mm:  $\phi 100 - \phi 1000$  mm.

Diameter A for 3 mm:  $\phi 150 - \phi 1000$  mm.

### Calculation of L1 and L2:

$$L1 = 0,5 \times A$$

$$L2 = 0,866 \times A + 100$$

### Example:

$$A = B = C = 350$$

$$L1 = 0,5 \times 350 = 175$$

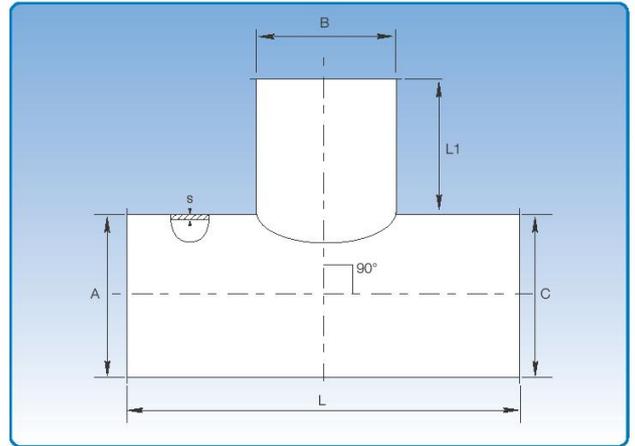

$$L1 = 175 \text{ mm}$$

$$L2 = (0,866 \times 350) + 100 = 403,1$$

$$L2 = 403 \text{ mm}$$

# Automation for sliding dampers, throttle valves and diverters

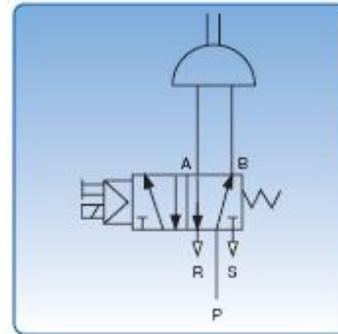

The circuit diagrams shown apply to the standard systems on the sliding dampers, throttle valves and diverters.

The systems operate pneumatically at maximum 6 bar and electrically at 230 V AC. Systems operating at other voltage levels can be supplied.

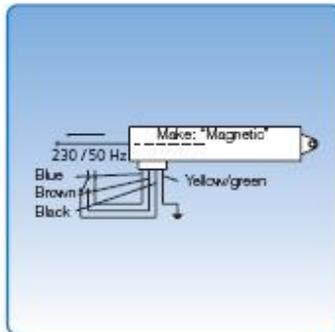

Circuit diagrams for systems operating at other voltage levels are available.

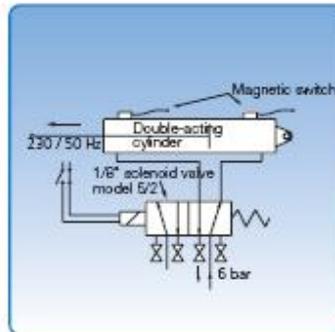

Circuit diagram of electric motor for pressed diverter, diameter: ø100 - ø200 mm.

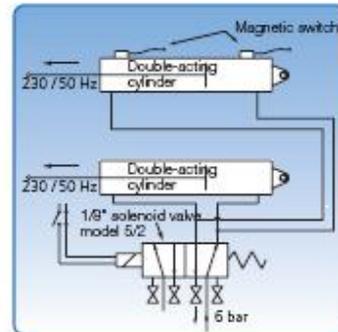

Circuit diagram of pneumatic actuator for pressed diverter, diameter: ø100 - ø200 mm and throttle valve, diameter: ø80 - ø400 mm.

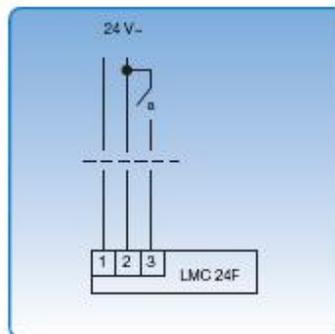

Circuit diagram of electric cylinder for welded diverter, diameter: ø80 - ø550 mm and standard sliding damper, diameter: ø80 - ø275 mm.

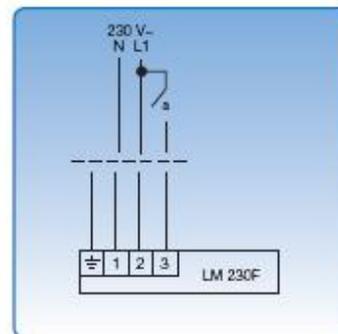

Circuit diagram of pneumatic cylinder for welded diverter, diameter: ø80 - ø550 mm and standard sliding damper, diameter: ø80 - ø500 mm.

Circuit diagram of two pneumatic cylinders for tight sliding dampers, diameter: ø80 - ø500 mm.

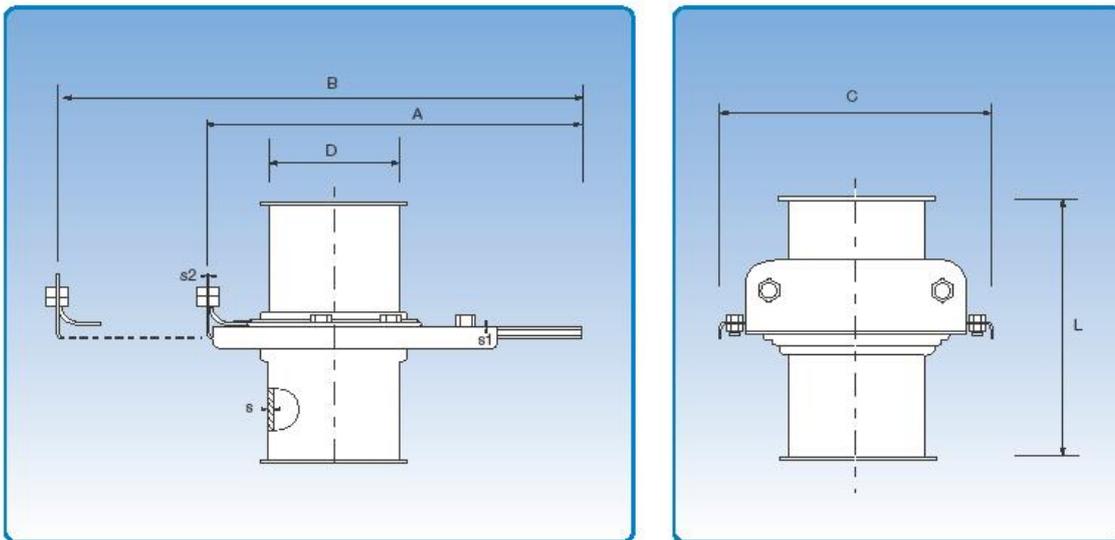

Circuit diagram of electric motor for throttle valve, diameter: ø80 - ø160 mm.

Circuit diagram of electric motor for throttle valve, diameter: ø180 - ø400 mm.

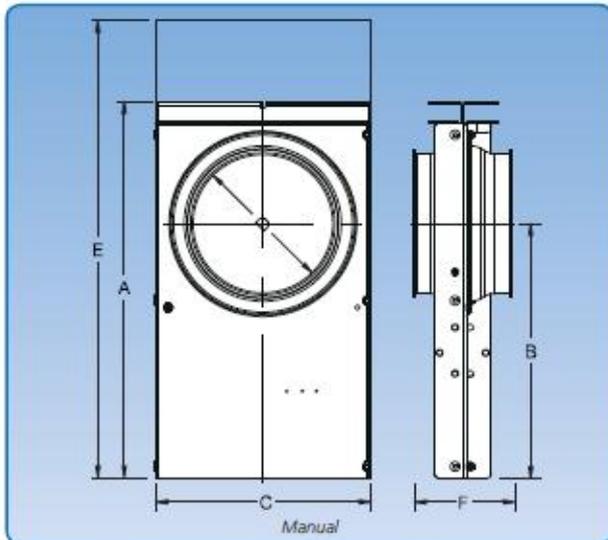

# Tight sliding dampers, $\varnothing 80 - \varnothing 200$ mm galvanised, manually operated

Dimensional specifications are given in the table below.

# Tight sliding dampers, galvanised, manual & pneumatic

Dimensional specifications are given in the table below.

### General

Sliding dampers are made of 1.50 mm, 2.00 mm and 2.50 mm galvanised sheet metal (s). The damper plate slides in the polyether and PEHD gaskets to ensure optimum tightness.

Dimensional specifications are given in the table below.

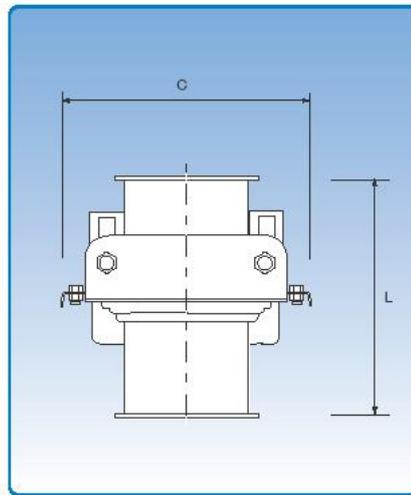

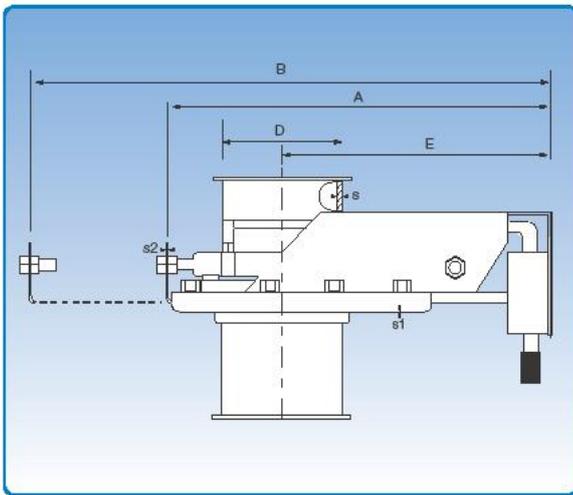

### With pneumatic actuator

The pneumatic damper is fitted with 2 pneumatic cylinders running in parallel. Solenoid valve: monostable 5/2 valve with 1 x 230 V AC - 50/60 Hz electric coil or 24 V DC. Pneumatic pressure: 4-6 bar.

# Jet caps, galvanised

## Technical data

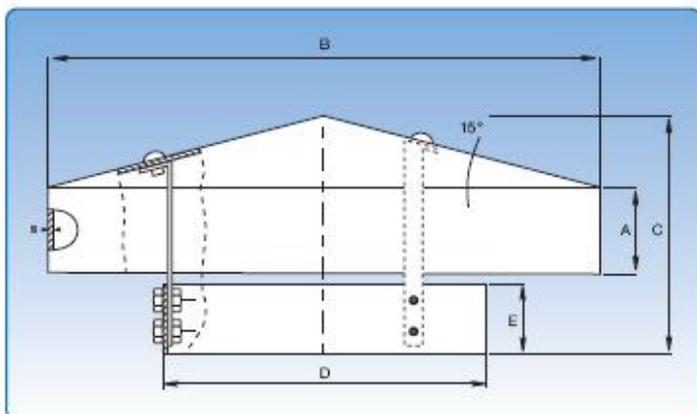

Pressure drop curves for diameter ø80 - ø250 mm.

Pressure drop curves for diameter ø400 - ø1000 mm.

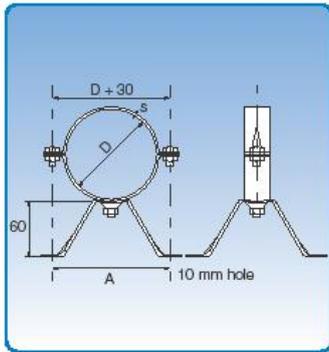

# Rain caps, galvanised

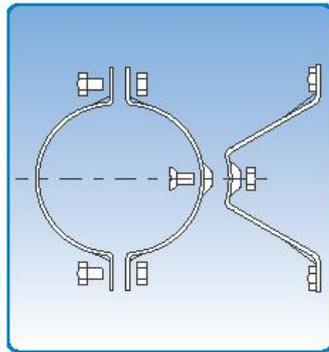

Dimensional specifications are given in the table below.

Dimensional specifications
