

# Advanced spring coiling solutions

## Complete solutions for spring manufacturing

Tekda offers a comprehensive range of advanced products designed to meet diverse spring manufacturing and assembly needs. Our lineup includes two types of coiling machines: the CNC-controlled Tekda C4 series, ideal for high-precision spring production and seamless integration into assembly lines, and the pneumatically driven Tekda C2 series, known for its durability and reliability, catering to various output rates and spring designs.

## Tekda C4 series

CNC-based spring coiling system for assembly lines.

### Features

- Unlimited wire feed
- CNC-controlled movements
- Possibility to get production feedback
- Multiple delivery points, possibility to serve different assembly lines
- Only good springs are delivered to the production line
- Small factory footprint
- Post processing solutions (heat treatment, length and load verification)

## Tekda C2 series

Pneumatic spring coiler for automatic assembly lines.

### Features

- High precision coiling
- Unlimited wire feed
- Multiple delivery points
- Only good springs are delivered to the production line
- Small factory footprint
