The Grass Yarn and Tufters Forum was held in Madrid from 28<sup>th</sup> February to 2<sup>nd</sup> March 2023.

Ettore Musacchi from ETRA attended and made a presentation to explain why it is important to support the use of recycled rubber infill material. The benefits are not only for the environment, but also for the sport, for social relations, and to grow a really green economy.

The presentation tried to clarify what is behind the decision adopted by the Commission and the impacts on the industry, the sport facilities, the environment.

Infill materials represent the biggest end market for recycled tyre materials (RTMs). It allows a sustainable management of post consumer tyres which in Europe are 4.2 million tons every year. Said in other words each European citizen produces every year about 8 kg of tyres. RTMs cannot be used back into new tyre production. This route is being developed. It will require many years and in any case it cannot absorb all these quantities. On the other hand recycled rubber granulates are an excellent infill material which contributed to the success of artificial turf.

This issue started in 2019. As it is not yet ended a possible solution would be still possible. However difficult, some further efforts should be done.

The Grass Yarn and Tufters Forum brings together companies from throughout the artificial grass global supply chain and organisations that determine and measure the end-user requirements.

Hosted at the Meliá Madrid Princesa hotel on 28 February - 2 March 2023, the event provided a forum to discuss industry news, review technical developments and gain an understanding of the opportunities and challenges facing their businesses.
