

Before you start make a warm bed by using BioBizz® substrates

Water 2-3 times a week, no need to water till run-off

You can mix several fertilizers in the same feeding water

Start using fertilizers when your baby plant is 10-15 cm or has 2-4 leaves

It is always better to be modest than to add more. A plant will not die from too little nutrients, but it won't survive an overdose

A pH-value between 6.2 and 6.5 is ideal  
Controlled pH-value between 6.2 and 6.3

We recommend to use our Calmag supplement **every watering when growing with RO or very soft water** or once a week in case of noticing Ca/Mg deficiency signs
