

Pneumatic diaphragm valve MV300

High performance Low cost

MV300 economic diaphragm valve has a compact one-piece pneumatic actuator structure, and the unique duckbill runner design ensures the best flow capacity. Under the premise of corrosion resistance, We have a variety of materials to ensure cost-effective applications.

Easy installation and maintenance

- * All-in-one compact design ensures the installation in limited space
- * All-plastic appearance is beautiful and corrosion resistant
- * Embedded diaphragm design to make the force uniform and prolong life
- * Super lubricating property, maintenance-free
- * Same sizes and installation length as international brands products
- * Integrated visual position feedback and easy to observe

High safety performance

- * Over pressure margin design of valve body and pneumatic actuator to ensure safety application
- * A variety of materials are available to resistant to high temperature and corrosion
- * The curved channel can ensure the effective closing of the valve in the application of high flow rate
- * Diaphragm compressor is high temperature resistant, which improves sealing performance

High Flexibility

- * True union connection, G thread
- * DIN, JIS and ANSI standards are available
- * Diaphragms are available for EPDM, FPM and EPDM-PTFE
- * Bodies are available for PVC-U, PVC-C, PP-H and PVDF
- * High quality and reliability for high operation times

The best flow performance

- * Superior flow channel makes the linear characteristics of the fluid more precise and controllable
- * The smooth and excessive curved channel has smaller pressure loss, and brings double flow capacity compared with the traditional diaphragm valve
- * Suitable for liquids with small amounts of particles and solids

Technical characteristics

Size	DN 15 (1/2 inch)
Operating pressure	PN 6
Body material	PVC-U PVC-C PP-H PVDF
Diaphragm	EPDM EPDM-PER FPM FPM-70 EPDM-PTFE
Shell	PP-GF Orange
Connector	G Union Socket-end Spigot Butt+IR
Installation	Same sizes and installation length as international brands products
Flow	Double flow capacity
Standard	DIN 8063 ISO 9393

Flow capacity

All data are for 20°C water with 1 bar pressure difference

Material	DN	d	inch	Kv 100	
				l/min	m³/h
PVC-U	15	20	1/2 "	125	7,5
PVC-C	15	20	1/2 "	125	7,5
PP-H	15	20	1/2 "	125	7,5
PVDF	15	20	1/2 "	125	7,5

$C_v = k_v \times 0,07$; $F_v = k_v \times 0,0585$

Kv (l/min) ; Cv (gal/min) US ; Fv (gal/min) GB

Pressure & temperature curve

All data based on water for considering 25 years safe life time

Control pressure

The maximum input value for pressurized air is 6 bar
