Italian Wooden Finishes

Made in Italy

Finbi Vernici have gained experience and technical expertise to improve the constant dialogue with customers.

Our objectives for the development of new products to be in continuous progress and we want to become more modern and technological to give to the market the products of the future.

Allways to give the total satisfaction of the final customer.

The range of products specifically developed to meet every type of request on the market includes:

- PU based sealers and top coats
- Polyester based sealers and top coats
- Picture frames painting products, for modern, classical, new effects cycles
- Water and solvent based products for outdoor applications with excellent wood protection
- Stains for any kind of application, roller, spray, dipping, brush etc.
- Fast drying oily patinas, solvent or water based
- Epoxy resin extra transparent for flooring
- Synthetic or epoxy based coatings for industrial applications, oven or natural drying
- Special products for flooring, in mono/two components ; high abrasion and hits fastness
- Water based sealers and top coats, one or two packs
- Liquid pure silver and gold application
- Nitro based sealers and top coats

Finbi Vernici warehouses for the storage of finished products are nowadays located on the most strategic points in Italy. Other different selling points are under construction all over the world.

This allows for a rapid execution of orders concerning the main products of the catalogue: we are proud to point out that our company is well known on the international market for its fast production lead time (10 days on average for a container of 19,000 Kg).

Finbi Vernici Italia has a testing centre, where raw materials received are controlled to be sure of their quality before using them in the production cycle. For each product then a control is made in order to verify its physical characteristics, which of its technical data can be reproduced, its practical application, and for the registration of "liquid counter samples" (up to 12 months from the production).

Laboratories are located on an area of around 500 sqm., with a test centre equipped with plant for varnishing application for testing and demonstration of the products.

The most modern research equipment permits to check each industrial cycle.

We invite you to contact us through our sales network to book a visit at our office, where we will be pleased to present you our whole range of products.

Finbi Vernici Italia is strongly connected between professional skills and attention to people's need, which are the two main characteristics of a team whose sole aim, from the General Manager to the ordinary worker, is to keep the customer satisfied.

SPECIAL EFFECTS

PRODUCT RANGE SPECIAL EFFECTS:

At the base of this line of products is the profound attitude to the design investigation, which allows wood to 'transform' into metal, ice, silk, marble or leather, through simple painting operations.

An easy, repeatable, economical solution, also applicable on small surfaces and highly customizable.

The Special Effects line once again reconfirms the vocation for research and innovation that has always been the basis of the mission of Finbi Vernici, one of the main players in Europe and in the world specialized in the production of wood coatings.

In the range of Finbi Vernici Special Effects, the color, proposed in multiple combinations of colors and textures, gives organicity and volume for new material effects, from metallic to reinforced concrete, passing by the refined crquelet effect, which imitates the aesthetic characteristics of crocodile skin .

With a sophisticated contemporary character, these proposals are designed both for the industry and for the craftsmen and are designed to meet the needs of the world of furniture and design.

All the Special Effects are ideal for the surface finish of paneling, wall paneling, furniture and accessories which, thanks to them, take on new aesthetic identities while maintaining the advantages of wood, a ductile, lightweight, environmentally friendly and environmentally friendly material.
