FLIGHT PLAN

1. The operational airport "Verona Boscomantico". After take-off, the optimal flight altitude is reached and the route is taken towards Lazise, our entry point to Lake Garda.
2. Flying over point 2, we proceed towards the north, admiring: Lazise, Bardolino, Garda and Punta San Vigilio.
3. The first crossing of the lake is made, leaving an enchanting valley on the right side of plane that extends towards Riva del Garda.
4. The west coast presents, in addition to the magnificent villages, the Vittoriale of Gabriele D'Annunzio, Isola del Garda with the historic and fascinating villa, enchanting Sirmione, Grotte di Catullo and Castello Scaligero. In section 4 – 5, under the constant observation and participation in dual command of the pilot, you'll try to pilot the airplane in complete safety.
5. Leaving Sirmione, we proceed towards the historic naval heart of the lake - Peschiera del Garda. We go up along the coast flying over the theme parks: Gardaland, Movieland Park and Caneva until the entry point, now exit, Lazise.
6. Return to the departure airport "Verona Boscomantico"

THE DAY IN DETAILS

"standard" but can be modified based on the needs of the passenger, weather conditions or if the operating procedures require it.

1) See you at the Airport Parking Exit Gate.

Personal presentation with the delivery of the high visibility vest (mandatory to wear before entering the operational area) and brief introduction of what we going to do.

2) Proceed towards the aircraft.

A brief external inspection is performed (the actual check and preparation of the aircraft for flight is done before meeting the passenger). When doing the "aircraft inspection" the various mechanical parts are presented with explanations of what they are for and how they respond during flight.

3) Let's see the cockpit.

The main instruments and the pilot's controls are presented. The basic concept of how to fly an airplane.

4) The take-off and the flight.

Prepared, organized before the agreed day. Thanks to the presence of dual controls the passenger will be able to try to fly in first person, always under the control of the pilot in command.

5) Once the "program" is completed, we return to the departure airport.

In this case the "program" means an panoramic flight. During the flight and after landing, photos are taken with the available gadgets (cell phones, cameras, etc.). The "standard" version does not mean a professional photo set, but it is available as an extra if requested.

6) Landing at the departure airport.

After "short dedicated photo shoot" we'll leave the airport operations area. If time permits, we proceed to the bar for coffee/tea or something else with post-flight comments 😊.

The complete duration of the "standard" program reported is about **2 hours**.

45' part with all the presentations and explanations

30' operational flight

15' ground movements

30' final part with photos and the bar

Recommended comfortable/sporty clothing

Operational activity is subject to technical availability and weather conditions.
